SERIES GL-RES/INCH
RESIDENTIAL ADJUSTABLE FLAT PLATE
THE INCH® CONCEALED PENDED
K-FACTOR 4.9

GENERAL DESCRIPTION
The GL4906 Adjustable Flat Plate Concealed pendent sprinkler is a decorative fast response glass bulb sprinkler specifically tested and listed for use in residential applications such as homes, apartments, hotels, and dormitories to provide control of these residential type fires and to improve the chance for occupants to escape. The GL4906 utilizes a 3mm frangible glass bulb as its heat sensing operating element. While providing the optimal aesthetic appeal with the low profile flat cover plate, the GL4906 additionally provides the largest vertical adjustment in the industry of a nominal 1”. This nominal 1” adjustment allows for previously unrecognized installation flexibility resulting in a clean and tight final “fit” to the ceiling. This sprinkler may be installed within dwelling occupancies as allowed by NFPA 13, 13D, 13R and any other related documents as appropriate.

OPERATION
The soldered cover plate drops off the retainer assembly when exposed to heat, as from a fire, that has reached the plate’s listed temperature rating exposing the sprinkler above. Upon the releasing of the cover plate, the deflector, which is connected to two guide pins, drops down below the ceiling into its intended position. As heat encompasses the glass bulb operating element of the sprinkler, the fluid in the bulb expands, compressing the air bubble within the bulb. When the air bubble can no longer compress, the fluid expansion causes breakage of the glass bulb, resulting in release of the water seat assembly, and discharge of water from the sprinkler.

NOTE:
Users should refer to Globe’s web site (www.globesprinkler.com) to assure that the most recent technical literature is being utilized.

TECHNICAL DATA
Approvals
• cULus - EU
K-Factor
• K4.9 gpm/psi½ (70.6 lpm/bar½)
Temperature Rating
• Sprinkler: 155°F (68°C)
• Cover Plate: 135°F (57°C)
Cover Plate Finishes
• Chrome/White Painted
(For painted plates other than white, contact Customer Service)
Caution: Cover Plates must have factory applied finishes. Never paint/coat plates in field.
Thread Size
• 1/2" NPT (15mm)
Vertical Adjustment
• 1” (25mm) Nominal
Maximum Working Pressure
• 175 psi (12 bar)
Materials of Construction
• Frame - bronze • Deflector - brass • Screw - brass
• Lodgement Wire - stainless steel • Bulb seat - copper
• Spring - nickel alloy • Seal - teflon
• Bulb (3mm) - glass
• Cover Plate - brass • Concealed Cup - carbon steel
**DESIGN CRITERIA**

The Globe Concealed Pendent Sprinkler (GL4906) is cULus Listed for installation in accordance with this data sheet as well as the applicable installation Standard being utilized.

**Globe Residential Sprinkler Installation Guide**

When conditions exist that are outside the scope of the provided criteria, refer to the Globe Residential Sprinkler Installation Guide (Document GFS-380) for recommendations that may be acceptable to the authority having jurisdiction.

**Hydraulic Design (NFPA 13D and 13R)**

For systems designed to NFPA 13D or NFPA 13R, the minimum required sprinkler flow rate is given in TABLE A for the coverage areas shown. The sprinkler flow rate is the minimum required discharge from each of the total number of “design sprinklers” as specified in NFPA 13D or NFPA 13R.

**TABLE A: NFPA 13, 13R, AND 13D HYDRAULIC AND INSTALLATION DESIGN CRITERIA FOR GL4906 CONCEALED SPRINKLER**

**NOTE:** Deflector-to-Ceiling Distance Criteria reflects 2019 Edition of NFPA 13D and 13R.
**CARE AND MAINTENANCE**

Always obtain permission from the proper authorities to shut down the affected fire protection system and notify all personnel who may be affected by this action before closing a fire protection system main control valve for maintenance work on the system that it controls. Sprinklers should only be cleaned by means of gently dusting with a feather duster; otherwise, non-operation in the event of a fire or inadvertent operation may result.

When properly installed, there is a nominal 1/8" (3mm) air gap between the Cover Plate and the ceiling (FIGURE 1). This air gap is necessary for proper operation of the sprinkler by allowing heat flow from a fire to pass below and above the Cover Plate to help assure appropriate release of the Cover Plate in a fire situation. This annular “gap” must be maintained and should never be sealed or caulked.

Factory painted Cover Plates must not be repainted. In accordance with NFPA 25, Sprinklers which are found to be leaking or exhibiting visible signs of corrosion must be replaced.

Automatic sprinklers must never be painted, plated, coated, or otherwise altered after leaving the factory. Care must be exercised to avoid damage to the sprinklers—before, during, and after installation. Sprinklers damaged by dropping, striking, wrench slippage, or similar incidents, must be replaced.

The owner is responsible for the inspection, testing, and maintenance of their fire protection system and devices in compliance with this document, as well as with the applicable standards of the National Fire Protection Association (e.g. NFPA 25), in addition to the standards of any other authorities having jurisdiction.

Refer to Globe’s Residential Installation Guide for further Care and Maintenance information.

---

**INSTALLATION**

**NOTICE**

Do not install any bulb-type sprinkler if the bulb is cracked or there is loss of liquid from the bulb. Sprinklers should be tightened enough to obtain a leak-tight joint when water pressure is applied and/or hydrostatic test is performed. Sprinklers should not be overtightened as this can result in distortion and subsequent leakage. It is recommended not to exceed 14 ft.-lb. (19.0 Nm) torque for 1/2 inch NPT sprinkler threads.

---

**Step 1.** Install pendent sprinklers in the pendent position, with the centerline of the sprinkler perpendicular to the mounting surface.

**Step 2.** Remove the Protective Cap.

**Step 3.** With pipe-thread sealant applied to the pipe threads, and using the Concealed Sprinkler Wrench P/N 332765 (FIGURE 6), install and tighten the Sprinkler/Concealed Cup Assembly into the fitting.

**Step 4.** Replace the Protective Cap by pushing it upwards until it bottoms out against the Support Cup. The Protective Cap helps prevent damage to the Deflector and Drop Pins during ceiling installation and/or during application of the finish coating of the ceiling.

**NOTICE:**

The system is considered Out of Service when the protective caps are in place.

**Step 5.** After the ceiling has been completed with the 2-3/4" (70mm) diameter hole, remove and discard the Protective Cap and verify that the Deflector moves up and down freely. If the sprinkler has been damaged or the deflector does not move up and down freely, replace the entire sprinkler assembly. Do not attempt to modify or repair.

**Step 6.** Push on the Cover Plate Assembly until its flange contacts the ceiling. Never attempt to screw on the Cover Plate Assembly such that it lifts a ceiling panel out of its normal position. If the Cover Plate Assembly cannot be engaged with the Mounting Cup or the Cover Plate Assembly cannot be engaged sufficiently to contact the ceiling, the Sprinkler Fitting must be repositioned.
ORDERING INFORMATION

Sprinkler/Cup Assembly
Specify:
Qty. • P/N ........................................ GL490615501

Cover Plate Assembly Finish
Specify:
Qty. • P/N
135°F (57°C) Chrome .................................. 332891
